

## The Design of Cross-Laminated Timber Slabs with Cut-Back Glulam Rib Downstands - From Research to Live Project

<https://research.thinkwood.com/en/permalink/catalogue1736>

Author: Papastavrou, Panayiotis  
Smith, Simon  
Wallwork, Tristan  
McRobie, Allan  
Niem, Nicholas

Year of Publication: 2016

Country of Publication: Austria

Format: Conference Paper

Material: CLT (Cross-Laminated Timber)  
Glulam (Glue-Laminated Timber)

Topic: Mechanical Properties

Keywords: Finite Element Modelling  
Full-Scale  
Embedment Depth  
Reinforcement  
Screws

Language: English

Conference: World Conference on Timber Engineering

Research Status: Complete

Notes: August 22-25, 2016, Vienna, Austria  
p. 4809-4818

### Summary:

A research project was undertaken to investigate the behaviour of composite CLT slabs with glulam downstands cut back from the supports. A desk study and Finite Element Modelling (FEM) were used and evaluated on their ability to model and design such a structure, focusing on the cut back location and utilising reinforcement screws...
