Author: Sato, Nozomi
 Uetsuki, Kazuki
 Tanaka, Kei
 Hagino, Tsuyoshi
 Noda, Kenji
 Satomura, Norihiko
 Koshihara, Mikio
 Inoue, Masafumi

Year of Publication: 2016

Format: Conference Paper

Material: Glulam (Glue-Laminated Timber)

Application: Columns
 Wood Building Systems

Topic: Connections
 Mechanical Properties

Keywords: Loading Tests
 Yield Moment
 Multi-Storey

Conference: World Conference on Timber Engineering

Research Status: Complete

Notes: August 22-25, 2016, Vienna, Austria
 p. 5393-5400

Summary:

In Japan, the moment resistance connections of large-scale timber building are inefficiency in terms of time and economic, because connections and column base hardware are custom-made to obtain the required performance. To improve this problem, it is necessary to unify standardization of their connection. At first, in this study, we focused on column-base connection, the horizontal...
