Organization: Oregon BEST  
 Year of Publication: 2017  
 Country of Publication: United States  
 Format: Report  
 Material: CLT (Cross-Laminated Timber)  
 Topic: Market and Adoption  
 Keywords: Market  
 US  
 Economic Impact  
 Language: English  
 Research Status: Complete

**Summary:**

Oregon and southwest Washington are poised as a manufacturing hub for the emerging Cross Laminated Timber (CLT) market in the United States. The region is bountiful with luscious forestland, a large percentage of which is designated as working forests. Thirty million acres of forest span across Oregon alone. As a value add product that has environmental and social co-benefits, CLT is economically competitive as a structural framing product for multi-story, even high-rise building construction: a market previously dominated by concrete and steel. The research and outreach activities performed as part of this 2015-2017 study have played a vital role in continuing the advancement of the CLT market in Oregon & SW Washington. Eager regional stakeholders see CLT and other mass timber panel products as forest products capable of providing economic benefit to communities within our region that had grown around forest product industries.
