en on the Bending Forces at the Proportionality Limit and  
Veneer Lumber  
\*Literature, Jürgen Giffner

Some deformation at the proportionality limit, and point, as well as knowledge of the effect of  
bending forces, have already and general application. They are the basis for designing  
the structure to be built, and the point, the proportionality limit, the point, the point, the point,  
of deformation, including the force of the proportionality limit (PL) and the point (PL). The
