

## Timber-Glass-Composites – New Ways of Bracing Systems in Structural Engineering

<https://research.thinkwood.com/en/permalink/catalogue1747>

Author: Hackspiel, Christoph  
Schober, Peter

Year of Publication: 2016

Country of Publication: Austria

Format: Conference Paper

Material: Timber-Glass Composite

Application: Hybrid Building Systems

Topic: Connections  
Mechanical Properties

Keywords: Adhesives  
Loading  
Load Bearing Capacity  
Fracture Tests  
Failure Mechanisms  
Durability  
Robustness

Language: English

Conference: World Conference on Timber Engineering

Research Status: Complete

Notes: August 22-25, 2016, Vienna, Austria  
p. 4956-4963

### Summary:

The architectural need for more transparent building envelopes not only changed the appearance of the buildings, but also their structural behaviour. Walls do not only have a vertical load-bearing function any more, they are also used for the transfer of wind and earthquake induced loads. Structural sealant glazing structures have been used for...
