

## System Solutions for Point Supported Wooden Flat Slabs

<https://research.thinkwood.com/en/permalink/catalogue1784>

Author: Zingerle, Philipp  
Maderebner, Roland  
Flach, Michael

Year of Publication: 2016

Country of Publication: Austria

Format: Conference Paper

Material: CLT (Cross-Laminated Timber)

Application: Wood Building Systems

Topic: Mechanical Properties  
Connections

Keywords: Point-Supported  
Stiffness  
Load Carrying Capacity  
Multi-Story  
Reinforcement

Language: English

Conference: World Conference on Timber Engineering

Research Status: Complete

Notes: August 22-25, 2016, Vienna, Austria  
p. 5663-5668

### Summary:

The challenge with point-supported flat slabs is the stress concentration at the supporting points. The small strength of the wood perpendicular to the grain should not reduce the load carrying capacity of the CLT –Panels. Therefore, there are some existing state of the art methods of reinforcement with self-tapping screws, which open up the...
